Product Rationalization – SIGMACOVER™ 805 phase out

Dear Valued Customer,

In line with our effort to have a more sustainable product range and move away from substance of concerns, we are moving forward with the deletion of *SIGMACOVER* 805 in the EMEA region.

SIGMACOVER 805 is a high solids polyamine adduct cured epoxy coating currently in our range. We have other alternatives in our product range and would like to bring your attention towards *SIGMASHIELD*™ 880.

SIGMASHIELD 880 offer a number of benefit over *SIGMACOVER* 805: Higher solids, shorter minimum overcoating interval, wider dry film thickness range. *SIGMASHIELD* 880 has also long track record, is globally available and is certified in various Norsok and ISO 12944 systems. We are actively working on the *SIGMASHIELD* 880 to remove substance of concerns from its formula.

SIGMASHIELD 880 is also available in a glass flake-containing version and in an aluminum version.

Should you have questions about the most suitable replacement for *SIGMACOVER* 805 in your particular field of application, please contact your local technical support or sales representative that will guide you towards the best solution.

The phase out of *SIGMACOVER* 805 is targeted for September 2021.

If you would like to trial our other solutions prior to this change or discuss any aspect of this in more detail, please do not hesitate to contact your local account manager.

Yours Faithfully
